

FIFA World Cup 2026

All 104 matches as a calendar file. Free, unofficial, fan-made.

What is in the file

FIFA_World_Cup_2026.ics is a standard calendar file containing every match of the 2026 FIFA World Cup — group stage, knockouts, and the final. Each event includes the kickoff time, venue, and group. Times are stored in US Eastern, and your calendar app will convert them to your local timezone automatically.

How to install

Apple Calendar (Mac, iPhone, iPad)

Download the .ics file. Double-click it on a Mac, or tap it on iPhone/iPad. Apple Calendar will ask which calendar to add the events to — pick a new calendar so you can hide it after the tournament if you want.

Google Calendar

Download the .ics file. Open calendar.google.com in a browser. Click the gear (Settings) → **Import & export** → **Import**. Pick the file, choose the calendar to add it to, and click **Import**.

Outlook

Download the .ics file. Open Outlook → **File** → **Open & Export** → **Import/Export** → **Import an iCalendar (.ics) or vCalendar file (.vcs)**. Pick the file and choose **Import** to add events to your existing calendar.

Notes

Times. Stored in US Eastern. Your calendar app will convert to your local timezone. If you see Eastern times instead, try a different import method.

Unofficial. This file is fan-made and not affiliated with FIFA. If you spot a mistake in dates, times, or venues, DM me and I will fix it.

One-time import. If FIFA updates the schedule, you will need a refreshed file.
